```
Pseudocode for 1.3.1.1.3
FUNC requestInternalData()

    Try:
        databaseConnection -> connectToDatabase
        query -> select * FROM users WHERE id -> userId
        statement -> prepareStatement(query)
        BIND userID -> "user ID"
        result -> statement.execute()
        if result isNot empty
            userdata -> result.fetch()
            Display userdata
        else:
            Display "user not found"

Close connection to database

    Except:
        Throw error message
```
